 NPIC Project N-265/64 (NSA/P0432/R22-64)

A completed Krug antenna and its support area have been located 7.5 nm south-southwest of Yakutsk. The Krug consists of a 390-foot-diameter antenna-reflector circle, a 780-foot-diameter intermediate circle, and an outer circular fence 990 feet in diameter. The typical 60- by 40-foot central building is present, as is the usual small building at the fence entrance. In addition, near the outer fence there are three unidentified objects and a probable shed.

The support area is fenced, measures 1,200 by 520 feet, and is situated 6,500 feet south-southeast of the Krug. It contains 14 buildings: the two largest are two-storied and measure 140 by 60 feet, and another appears to be approximately three stories high. In addition to the buildings, there are three possible communications vehicles/vans and an unidentified object within the fence.

of extremely poor quality, shows indications of the site being present (e.g., the same road pattern is visible).

No communications sites or equipment, other than the three possible vehicles/vans mentioned above, could be identified within a 6-nm radius of the Krug. However, because

heavy snow cover and small scale preclude identification of antenna patterns, communications facilities are very difficult to determine on present photography.
